

Accounts — How It Works

ValveTrack Job Card System · a guide for the Accounts team

When a job reaches Accounts

After a job has been **Dispatched**, someone moves it to **Accounts Processing** (the “Send to Accounts” button). At that point the job appears in your queue and the **Accounts** section on the job card becomes editable. This is where the job's commercial and payment record is kept — turning a delivered job into a billed and paid one.

What you record

Field	What it is	When you fill it
PO Number & PO Value	Customer purchase order reference and its value	When the job enters Accounts
Invoice Number, Date & Value	The invoice you raise for the dispatched job	When you invoice the customer
GRN Status & Date	Goods Receipt Note — Pending / Received / Held	When the customer confirms receipt
Payment Status	Pending / Partial / Received	As payment progresses
Payment Date & Amount	When money was received and how much	On receiving payment
Payment Due Date	When payment is expected from the customer	At invoicing — drives follow-up
Tally Reference	Voucher number linking to your Tally entry	When posted in Tally
Notes	Any commercial remarks	As needed

Step by step

- 1 Open the job card (it will show status **Accounts Processing**).
- 2 Scroll to the **Accounts** section and click **Add Account Info** (or **Edit**).
- 3 Enter the **PO number/value** and the **invoice** details once the invoice is raised.
- 4 Set the **Payment Due Date** so the job can be followed up before it becomes overdue.
- 5 Update **GRN Status** to *Received* when the customer confirms goods receipt.
- 6 As payment comes in, update **Payment Status** and record the **date and amount**; add the **Tally reference** once posted.
- 7 When payment status is **Received**, click **Close Job Card** to finish the job.

The closing rule

A job **cannot be closed** until:

Condition	Who it applies to
A dispatch record exists for the job	Everyone
Payment status shows Received	Everyone except Admin

An Administrator can override the payment condition in exceptional cases (for example, an agreed credit arrangement). Normal closes should wait for payment to be marked Received.

In one line

Accounts is where a delivered job becomes a **tracked, invoiced, and paid** job — and only then is it closed. Nothing is deleted or rushed: the payment due date keeps outstanding jobs visible until the money is in.
